

## **Problem**

Enterprises can **lose up to 1% of their payments** due to various operational errors, payment duplicates or fraud.

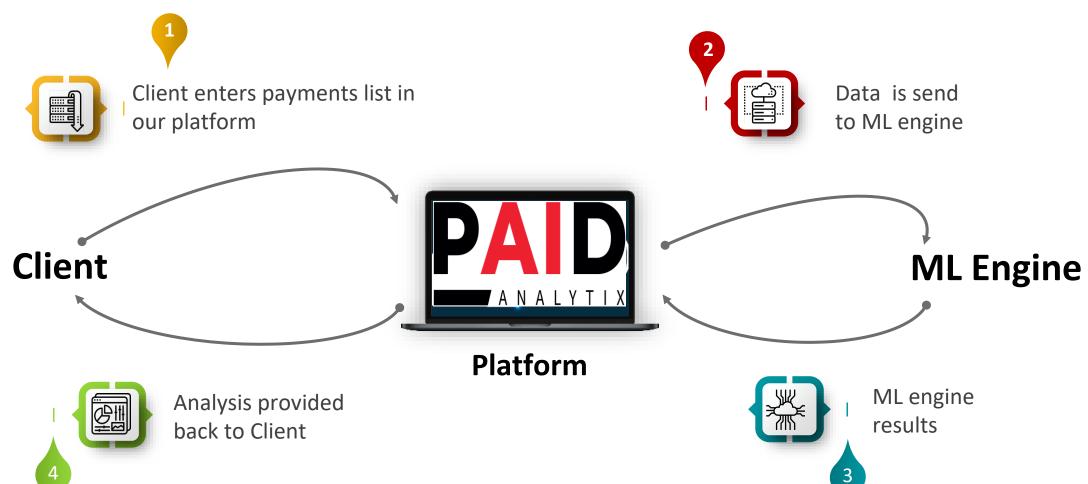

# **Example**

A company with payments of 100 Million can lose yearly up to 1M€

## **Our Solution**

### How are we different

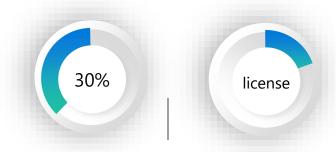

#### Recovery Audit companies

You can contact a recovery audit company that analyses past transactions for a contingency fee.

#### Do it yourself

Paid Analytix platform allows companies to handle this issue by themselves.

#### High Operational Effort

Long duration of the control due to high number of false positives. May impact payment term.

#### Low Operational Effort

50% effort reduction Day 1 which will allow the control before the payment run

#### Replicability

The current tool is not easy to adapt to new clients and connect to their accounting systems

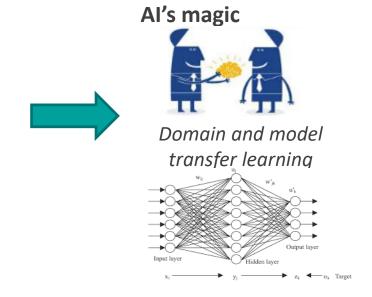

#### Plug and Play

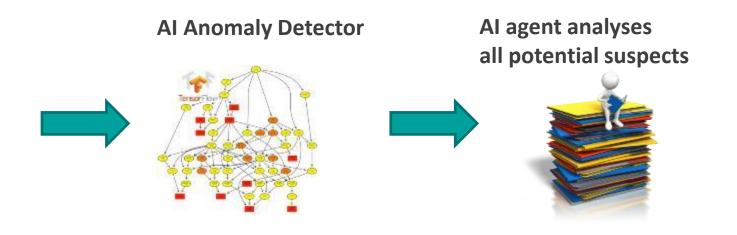

The pAID tool needs just a data extract in order to run the ML engine

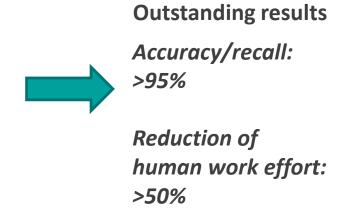

## How does it work

\* First mover advantage

## Who uses our solution?

- > 500.000 payments analysed
- > 7 billion EUR

# Currently deploying:

Oil&Gas

Insurance

Retail

- 600.000 payments
- Several billion EUR
- > 300.000 payments
- ➤ Up to 1 billion EUR
- > >1.000.000 payments
- Several billion EUR
